Unpacking Ihres MN8

Take the cover out of the box.
When you open the box, you will find
The following:

MN8 earphones

MN8 travel case

Sensors and Earphone package

USB-C charging cable

Bluetooth dongle

Two earphone sizes

Two sensor types

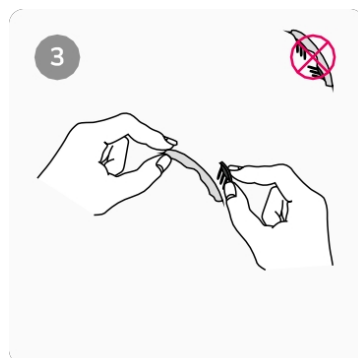

Tool for Removing sensors

STEP 1

Replace your sensors

We have added new MN8 sensors for improved comfort and contact with your ears. Please replace the sensors for a better experience.

Insert the tip of the sensor removal tool into the small round opening at the end of the ear hook. Then carefully press upwards until you hear a click.

Press the sensors upwards to remove them.

Insert the new sensors, making sure that both are pointing downwards.

Push the sensor pad back into the ear hook. You should hear a click.

STEP 2

Charging your MN8

MN8 is charged and tested before despatch - so you can use it straight away.

To charge MN8, proceed as follows:

- Connect the MN8 to a power socket using the charging cable (supplied) and a USB power adapter (not supplied).
- It can take up to two hours to fully charge the MN8.
- The LED lights up red while MN8 is charging. When MN8 is fully charged, the LED lights up green.

Charging tips

- *To maximise the use of MN8, we recommend fully charging it before use. If the LED does not flash when you press the power button, your MN8 needs to be charged.*
- *MN8 does not switch on when charging. This is a safety function to prevent electric shock.*
- *Do not charge MN8 when it is in use.*

STEP 3

Switching your MN8 on and off

Switch on MN8

To switch on the MN8, press and hold the power button for two seconds. The LED flashes and you will hear an audio announcement with the message "Switch on".

Switch off MN8

To switch off the MN8, press and hold the switch-on button for five seconds. You will hear an audio announcement with the message "Switching off" and the LED goes out.

STEP 4

Connect the MN8 to a device

Download Contour or EMOTIV Launcher before using MN8 for the first time.

Bluetooth connections

When you switch on MN8 for the first time, it automatically switches to pairing mode and the LED flashes red and blue.

MN8 requires two Bluetooth connections:

- One for data (Bluetooth Low Energy) and
- One for audio streaming (Bluetooth Classic).
- We recommend pairing the data first and then the audio streaming.
- You can use both data streams simultaneously or one after the other.

STEP 5

MN8 screw connection

Your MN8 should fit comfortably. It has adjustable ear hooks, interchangeable sensors and ear tips in different sizes to ensure a comfortable fit.

Place your MN8 over your neck so that the capsule rests on your shoulders.

Take the left earpiece and place it over your ear.

Push the earplugs into your ear canal and make sure that they fit comfortably, but not too tightly.
sit firmly. Both curves in the earpiece should touch the back of your ear.

Repeat steps 2 and 3 for your right ear.

STEP 6

Changing the earplugs

MN8 comes with medium sized earbuds. Two other sizes can be found in the Sensors G Earbuds package.

How to change the earplugs:

1. Remove the fitted earplugs by pulling them off the metal channel sensors.
2. Once removed, you can attach the new earplugs by pressing them onto the metal channel sensors.

Due to the sensitive nature of EEG recordings, the earplugs should fit very snugly in your ears (no gaps). If in doubt, choose the larger size.

STEP 7

Adjusting the ear hook

If you feel that the ear hooks are too tight or too loose around your ear, you can adjust them by gently pushing or pulling.

Do not use too much force as this could damage the ear hook.

For further help on using EMOTIV MN8, please refer to the manual or contact customer service.
