

COMPARING EXERFLY TO EXXENTRIC

Hi there! We're Exerfly, and we just wanted to share with you a bit about what it is that really sets us apart, about why we're different to other Flywheel training providers, and how exactly we've reimagined the wheel. We offer game changing, elite equipment that is used by professional athletes and sports teams all over the globe, and now we want to share that with you.

Over the last six years, we've tested our equipment on some of the highest-level athletes in NZ, and we've seen incredible results. Designed with the help of elite strength & conditioning coaches, engineers, and professional sports teams, we created a product that is virtually unbreakable.

Our biggest point of difference (among a long list of others!) is that we offer motorised technology to really take your performance to the next level. With an optional motor that offers up to an 80% boost in the Eccentric phase of a movement, the Exerfly can quite literally take you to levels unachievable with traditional weight training. No one else in the Flywheel market has technology anything like this, making us market-leaders and industry firsts in terms of motorised Flywheel training. This gives us the elite edge, which is probably why we are so popular all across the globe, and it's probably why so many athletes and sports teams have trusted our equipment over the years. Our elite technology, versatility, and durability makes us the perfect fit for all athletes.

We're very proud of our equipment and will do everything we can to support you every step of the way, because what's most important for us is that you see incredible results. We're confident in the quality of our equipment, and we know you will be too.

Exerfly Platform vs Exxentric kBox4 Pro

	Exerfly Platform	Exxentric kBox4 Pro	Notes
Price	USD\$5,874 - \$9,648	USD\$3,480 - \$5,950 + shipping	With Exerfly you'll be able to train more movements with options such as the Bench Press, Foot Block, Rope Guide and motorised technology. Virtually unlimited training options means you'll always have room to improve.
Dimensions	130 x 105 x 30cm	98 x 63 x 23cm	With a larger footprint, the Exerfly won't tip or become unstable. It is also more comfortable for lunges, bench presses, hip thrusts, calf raises, etc. A larger platform means a larger variety of exercises can be achieved easily.
Weight	40kg	15.5kg	Exerfly is a robust platform for all exercises, and the extra weight means it's more stable for stronger athletes, unlike the KBox which usually has to be weighted down.
Material	Aluminium, Steel	Aluminium, Steel	

	Exerfly Platform	Exxentric kBox4 Pro	Notes
Number of Flywheels available:	4	4	We offer 4 different sizes of Flywheels, but our unique selling point is that you can load up to 7 Flywheels simultaneously, for almost twice the inertial load.
Max inertia	0.7kg.m-2	0.28kg.m-2, plus an additional 0.12kg.m-2 with the purchase of a special knob.	You can also use up to 7 Flywheels at one time on the Exerfly Platform, meaning a massive inertial load from the combined momentum of the Flywheels for an even more intense workout.
Transportable	Yes, wheels for easy transport	Yes	All Exerfly products are easily transportable.
Rope details	Nylon/Dyneema mix, 20mm x 2mm, customer can choose length, standard is 2.5m	Polyester belt, 1mm thick, 1.75m range of motion excl. accessories	Exerfly's rope has a breaking strain of 3000kg, and is made of highly abrasion resistant material, meaning it will last much longer, only needing to be changed every 6-12 months with regular use. We also supply one free additional rope with all orders. Single rope, never gets tangled.
Use for two handed exercises	Yes	No	The second rope can be engaged or disengaged when not in use. The extra rope makes exercises much easier and more accessible, eg. the bench press.
Sensor/Live Data	Yes	Yes	Data tracking 4000 times per second. Can send information between coaches and athletes.
Live Data transfer method	WiFi, Bluetooth coming soon	Bluetooth	The Exerfly App works everywhere – laptop, phone, desktop, etc. Bluetooth coming soon.
Motorised Technology	Yes	No	Programmatically increase eccentric overload with a boost of between 1- 80% for even greater resistance and a more intense workout.

	Exerfly Platform	Exxentric kBox4 Pro	Notes
