**kMeter II**  
Quick Start Guide

Before using your  
kBox or kMeter,  
please read the following

This kBox is equipped with a built-in kMeter that connects with your Android or iOS device to provide real time feedback. Two AA batteries are pre-installed and the kMeter is ready to connect via the app directly.

The kMeter turns on and off automatically and has no manual switch.

To distinguish between your different kBox and kMeter units, a sticker with a unique ID number on it is included. Place this sticker on your device for future reference. This unique number corresponds to the kMeter unit installed on the device.

If multiple kMeters are in range, a drop down list with kMeter IDs will be visible when the 'connect' option in the app is chosen. From here, select the device you wish to be connected to.

**This is your kMeter ID sticker below**

To learn more about the kMeter, how it works and about the different metrics, head over to our website:
