

SUDDEN CARDIAC ARREST

STROKE (AFIB)

ECG

- ✓ Atrial fibrillation (stroke risk) screening with 98.7% accuracy
- ✓ Unique feature: sudden cardiac arrest risk assessment

WIWE facilitates an unlimited number of ECG recordings and blood-oxygen level monitorings on a daily basis.

Medical professionals can obtain important information from the results sent in or presented in person by patients regarding heart rate, temporary irregularities in ECG, arrhythmia, or oxygen deficiency.

I recommend WIWE not only for monitoring patients with known heart problems but it can also offer useful extra information for the check-up of health-conscious patients and the prevention of heart and cardiovascular diseases.

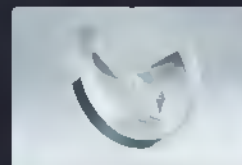

Prof. Dr. Béla Merkely
Rector of Semmelweis University, Director and university teacher at Városmajor Heart Centre

RELIABLE COMPANY BACKGROUND

Sanatmetal  Products

WIWE has been developed and manufactured by Sanatmetal Ltd. which has already proven in healthcare.

In traumatology, orthopaedic and spine surgery profiles it is among the top 40 companies in the EU, 70% of its revenue comes from export. With WIWE, Sanatmetal has opened a new chapter in preventing sudden cardiac arrest and stroke.
